

Table of Contents

Section A: Incidence of Reported ESRD

- A.1 Incident Counts of Reported ESRD: All Patients
by Demographic Characteristics & Primary Diagnosis
- A.3 Incident Rates of Reported ESRD, Unadjusted
per Million Population, by Demographic Characteristics & Primary Diagnosis
- A.5 Incident Counts of Reported ESRD Patients, by Time Period
by Age; Grouped by Gender & Race
- A.16 Incident Counts of Reported ESRD Patients, by Diabetic Status & State/Territory: All Patients
- A.18 Incident Rates of Reported ESRD, by Diabetic Status & State
per Million Population
- A. 19 Incident Counts of Reported ESRD Patients, by Diabetic Status & ESRD Network: All Patients
- A.21 Incident Rates of Reported ESRD, by Diabetic Status & ESRD Network
Per Million Population

Table A.1
Incident Counts of Reported ESRD: All Patients
by demographic characteristics & primary diagnosis

The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule
The age of the incident patient is determined as of the date of ESRD initiation.
†CMS began collecting Hispanic ethnicity data in April 1995; cells for years prior to 1996 have therefore been left blank.
*Values for cells with fewer than 10 patients are suppressed.
** Zero values in this cell.

The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule.
The age of the incident patient is determined as of the date of ESRD initiation.
U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.
†CMS began collecting Hispanic ethnicity data in April 1995; cells for years prior to 1996 have therefore been left blank.

Rates by age are adjusted for gender & race, rates by gender are adjusted for age & race, rates by race are adjusted for age & gender, and primary diagnoses are adjusted for age, gender, & race. The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule. U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.

Table A.18 (continued)
Incident Rates of Reported ESRD, by Diabetic Status & State
per million population

Rates by age are adjusted for gender & race, rates by gender are adjusted for age & race, rates by race are adjusted for age & gender, and primary diagnoses are adjusted for age, gender, & race. The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule. U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.

Table A.18 (continued)
Incident Rates of Reported ESRD, by Diabetic Status & State
per million population

Rates by age are adjusted for gender & race, rates by gender are adjusted for age & race, rates by race are adjusted for age & gender, and primary diagnoses are adjusted for age, gender, & race. The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule. U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.

**Table A.19
Incident Counts of Reported ESRD Patients, by Diabetic Status & ESRD Network: All Patients**
