The point prevalent cohorts and associated modalities are determined on December 31 of each calendar year without applying the 60-day stable modality rule.  
The age of the point prevalent patient is determined as of December 31 of the selected calendar year.  
U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.  
†CMS began collecting Hispanic ethnicity data in April 1995; cells for years prior to 1996 have therefore been left blank.
