The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule.
 The age of the incident patient is determined as of the date of ESRD initiation.
 †CMS began collecting Hispanic ethnicity data in April 1995; cells for years prior to 1996 have therefore been left blank.
 *Values for cells with 10 or fewer patients are suppressed.
 **: Zero values in this cell.

The incident cohorts and associated modalities are determined at the time of ESRD initiation without applying the 60-day stable modality rule.
The age of the incident patient is determined as of the date of ESRD initiation.
U.S. only; patients of unknown age or gender, or of other or unknown race are excluded so that rates can be calculated properly.
†CMS began collecting Hispanic ethnicity data in April 1995; cells for years prior to 1996 have therefore been left blank.
