

K. MEDICARE PAYMENTS

Medicare Claims Data

There are two types of Medicare claims: institutional and physician/supplier. All of the physician/supplier claims are Medicare Part B. The institutional claims consist of all Part A claims (Inpatient, Outpatient, Skilled Nursing Facility, Home Health Agency, and Hospice) and some Part B claims, notably outpatient dialysis. Physician/supplier claims account for about 80 percent of the claims but only 20 percent of the dollars.

The structure and content of the two types of claims are different, and so are the files derived from them. For institutional claims, there are two types of files: the Institutional Claims (Claims) file and the Institutional Claims Detail file. The Claims file indicates the type of claim, the dollar amounts, the type of dialysis involved (if any), and the dates of service. The Claims Detail file contains details like DRG, diagnoses, and procedures. For many analyses, the Claims Details file would not be needed.

For the physician/supplier claims, there is one type of file with one record for each claim line item. The file includes dollar amounts, dates of service, diagnosis and procedure codes, and type and place of service.

The Medicare Claims data are obtained from HCFA's Standard Analysis Files (HCFA SAFs). The HCFA SAFs are created on a calendar year basis six months following the end of the calendar year. HCFA estimates that the HCFA SAFs are 98 percent complete. The USRDS obtained data for about 29 million institutional claims (hospital inpatient and outpatient facilities, outpatient dialysis facilities, skilled nursing facilities, hospice facilities, and home health agencies) for 1993 through 1997. In addition, data for 191 million physician/supplier claims line items for 1993 through 1997 were obtained.

Data were obtained for all patient ID numbers currently in the USRDS database plus all ID numbers which had outpatient dialysis claims or a kidney transplant during 1997. The HCFA enrollment database was used to gather all of the cross-reference ID numbers for these IDs, that is all of the ID numbers under which these patients may have had claims. Patients who are not currently in the PMMIS were not included in the analyses in this ADR. Section K of the Reference Tables and the Cost Effectiveness Chapter are based on the analysis of Medicare Claims data. The claims data were merged first with patient demographics and second with treatment modality information obtained from the USRDS database.

Categories of Payments

The tables in Section K of the Reference Tables are based on Medicare payments. Medicare claims involve three dollar amounts which are candidates for tabulation: 1) the amount that was billed, 2) the amount that Medicare allowed based on its fee schedules, and 3) the amount which Medicare actually paid. The portion of the allowed charge which Medicare actually pays depends on deductibles and copayments. Starting in the 1998 Annual Data Report, rows for Medicare pass-through payments to hospitals for indirect medical education, kidney acquisition for transplants, indirect medical education, etc. are included and are added into inpatient totals, institutional totals and overall Medicare spending totals. To compare these totals with previous Annual Data Report totals the pass through payments need to be subtracted. In 1993, for example, the pass through total is \$168 million and the total Medicare is \$6.246 billion the figure for comparison with previous reports is \$6.078 billion.

The Medicare payments are classified by type of payment as shown in the table on the next page, which shows the basis for determining each category. This table also shows the summary categories which are reported. The PD Unit Supply and Hemodialysis Unit Supply categories were dropped from this ADR because the values were nearly zero.

Categories of Medicare Payments and Basis for Categorizing Claims

Category	Basis for Categorizing Claim
Total	
Total – Institutional	
** Inpatient	Claim type
**Inpatient Pass Throughs	Pass Through payments for med. educ., capital, etc
**** Non-Transplant Inpatient	Inpatient claim type with DRG other than 302
**** Non-Trans Inpat Pass Throughs	Pass through payments for non transplant patients
**** Transplant Inpatient	Inpatient claim type with DRG code = 302
**** Transplant Inpatient Pass Throughs	Pass through payments for transplant patients
** Outpatient Institutional	Claim type = outpatient but with no dialysis revenue center code
** Skilled Nursing Facility	Claim type
** Home Health Agency	Claim type
** Hospice	Claim type
** All Dialysis – Institutional	Claim type = outpatient but with no dialysis revenue center code
**** Hemodialysis – Institutional	Revenue center code
**** Perit Dial – Institutional	Revenue center code
**** Other Dial – Institutional	Revenue center code
Total - Phys/Suppl	
** Total Phys/Suppl Dialysis	
**** Total Hemo - Phys/Suppl	
***** Hemodialysis - Phys/Suppl	Physician/Supplier claim, HCPCS code
***** Hemodialysis Home Supply	Physician/Supplier claim, HCPCS code
**** Total PD - Phys/Suppl	
***** Perit Dial - Phys/Suppl	Physician/Supplier claim, HCPCS code
***** PD Home Supply	Physician/Supplier claim, HCPCS code
** Non-dialysis - Phys/Suppl	
**** PD Catheter - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Capitation - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Vascular Access - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** EPO – Phys/Suppl	Physician/Supplier claim, HCPCS code
****Iron - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Transplant - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Immunosuppressive - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Parenteral Nutrition	Physician/Supplier claim, HCPCS code
**** Other Surgical - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Other Medical - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Transportation - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Diag Lab/Rad - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** DME - Phys/Suppl	Physician/Supplier claim, HCPCS code
**** Other Phys/Suppl	Physician/Supplier claim, HCPCS code

Intent to Treat Model

Table K.1 in the Reference Tables shows aggregate Medicare payments by year and type of payment. The remaining tables, except for Table K.8, are based on an "intent to treat" model. This model computes payments per patient year at risk over the five year period 1993 through 1997. It is referred to as an "intent to treat" model because patients are classified based on their treatment modality at the start of the analysis period and retain that classification even if their dialysis modality changes. Aggregation of Medicare payments was done on an "intent to treat" basis, attributing all subsequent payments to the patient's starting modality. The only exception to this rule

was dialysis patients who later received a transplant. These patients were censored at date of transplant and a new record was created with transplant as the intention-to-treat modality. Only patients switching from dialysis to transplant could enter the model twice. All others remained assigned to their initial modality.

Patients are classified into four intent to treat modality categories: hemodialysis, CAPD/CCPD, other/uncertain dialysis, and transplant. The other/uncertain dialysis category includes cases where the dialysis modality is unknown or is not hemodialysis or CAPD/CCPD or where the patient has not been on the modality for 60 days at the start of the period.

The transplant category includes patients who have a functioning transplant at the start of the period and patients who receive a transplant during the period. For patients who receive a transplant during the period, the period is split into two periods. The patient is classified into one of the dialysis periods until the date of the transplant and then begins a new period in the transplant category.

Table K.3 shows the distribution of patients into these groups and the aggregate payments of each type for these groups. The remaining tables in Section K add two aggregate categories: All ESRD and All Dialysis. The "other/uncertain dialysis" patients are included in the All ESRD and All Dialysis categories.

The intent to treat model spans the five years 1993 through 1997. ESRD patients prevalent on January 1, 1993 or incident at any time during 1993, 1994, 1995, 1996, or 1997 were potentially eligible for inclusion in the study sample. The study start date for a given patient was defined as thirty days after the latest of the following:

- January 1, 1993.
- The first ESRD service date in the USRDS database for the patient.
- The Medicare Part B entitlement date from the USRDS database.
- The first month in which dialysis payments exceed \$675 (the tenth percentile of monthly dialysis reimbursement for all patients with dialysis in 1991).

Patients for whom Medicare is the secondary payer (MSP status) for all or part of the study period are excluded from the analysis. For patients who have employer paid group health insurance coverage, Medicare is the secondary payer for the first 18 months of ESRD. Data on the MSP status of patients are obtained from the Medicare enrollment database. MSP patients are excluded from the analysis because it is impossible to characterize the total costs of their care. Table K.2 shows that about 9.5 percent of the patients with Medicare payments during 1993 through 1997 were excluded because they were MSP for all or part of the period.

Medicare payments were aggregated from the study start date until the patient's date of death, date of transplantation, date lost to followup, or December 31, 1997, whichever came first. Patients were defined as lost to followup if there were a period of three consecutive months in which dialysis payments (institutional plus physician/supplier) did not sum to \$675 per month.

Total costs during the followup period were divided by the length of the followup period in order to express all costs as dollars per year at risk (YAR). Costs per year at risk were calculated for all ESRD patients, for all patients by modality, and stratified by modality, age, gender, race, and diabetic vs. nondiabetic cause of ESRD. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause of ESRD missing are included only in the "All" category for diabetic ESRD status.

This year we were finally able to test the FORTRAN/C++ programs that produce the intent to treat model sums using SAS as the current version of SAS can finally handle the volume in the physician/supplier data. The test pointed out a deficiency between the physician/supplier sums produced by the FORTRAN/C++ programs and sums produced by SAS. Inspection of the code led to finding two problems with the FORTRAN/C++ programs. First, for dialysis patients who receive a transplant ending the intent to treat dialysis period, the physician/supplier payments were not being aggregated. Second, physician/supplier claims of one day duration with that day being the start of the intent to treat period were not being aggregated. The addition of the physician/supplier claims for dialysis patients who receive a transplant adds some payments to the total physician/supplier payment amount, but the overall payments per year at risk were not significantly affected. The second error, however, caused a very significant difference in the physician/supplier payments for one category of patients. Patients, who receive a transplant during the intent to treat period, have one day physician/supplier claims on the day of transplant from the surgeon for the transplant, from the anesthesiologist, from surgeon assistants if any, etc. The physician/supplier transplant row in Tables K.2, K.3, and K.7 is where the significant change occurs, the physician/supplier total row is also affected in these tables as is the Medicare total. The transplant row in the 1999 report for Table K.2 has a total of \$99.3 million whereas in the 1998 report the total was \$27.9 million and in the 1997 report \$28.8 million. In Table K.4 the payment rate for the transplant row and column is \$397 per year at risk as opposed to \$99 per year at risk in the 1998 report. The physician/supplier total column is \$3,785 per year at risk in the 1999 report for the transplant column and \$3,213 per year at risk for the 1998 report. The Medicare total for the same column is \$17,495 as opposed to \$17,307 in the 1998 report. The transplant column in Tables K.2, K.3, and K.7 is also affected by these changes. In Table K.5, the primary effects of the correction appear in the modality group: 6 transplants subtables.

Table K.1
Total Medicare Payments for ESRD Patients by Type of Payment and Year

	YEAR

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.

Table K.3
 Medicare Payments for Non-MSP ESRD Patients by Type of Payment and Treatment Modality
 Intent to Treat Model Spanning 1993 - 1997

(CONTINUED)

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.

(CONTINUED)

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.

(CONTINUED)

*Values for cells with fewer than 10 patients are suppressed. The payment values include prorated Medicare payments starting on the later of the date of first ESRD service or the first month in which dialysis payments total \$675 or more. Patients are at risk until death, transplant, or the end of period (12/31/97). An intent period also is censored if dialysis payments fall below \$675 / month for 3 consecutive months. Year=ALL means the intent period defined above not the 5 years 1993-97. Diabetic ESRD status is based on the primary disease causing ESRD. A patient with a non-diabetes cause in some cases may also have diabetes, but the diabetes is not judged to be the cause of ESRD. Persons with cause missing are included only in the ALL category for ESRD status. Persons with race missing are included only in the All category for race.
